

The thin line that separates 'knowledge' from 'application and willingness from 'doing' also delineates success and failure. With this belief, my three Ps or mantras, have been persistence, passion, and positivity in my professional as well as personal endeavours. My fruitful career with Calibrant Classes played a key role in aggregating my technical knowledge with my capabilities in skillfully managing tasks, time, and people. As I embark on this stage where I yearn to enhance my competency and explore my own potential. I feel pursuing a MS in Computer Science program will hugely impact my portfolio of knowledge and expertise. I hope to acquire new skills and thrive on my knowledge through the program, which will be highly advantageous in my future career with a reputed global company. I aspire to lead a company in the long run and make great strides.

My inclination towards Computers was no different than that of my friends. However, I have always been into computers since the beginning, but that one day in college where there was an introductory class, completely changed my views of the subject. My fascination knew no bounds on learning that humans are exploring interdisciplinary avenues through mathematical calculations, writing programming codes, and developing programs. From understanding human DNA to weather forecasting, technology has taken an irreplaceable place in our lives. The undergraduate curriculum inspired me to augment my practical knowledge through projects, researches, and assignments. During the undergraduate program, I assayed my knowledge and abetted my technical skills through several projects, internships, and assignments. I applied the knowledge of Java and created a KOT system for restaurants as an assignment, and a numerous website with incremental upgrades making me explore new components in the web development field. A major part of my learning came from the project. The Website of Calibrant Classes. I explored everything I could to make sure I made the best out of my learning and make sure the client was satisfied with my work.

I am sure that my passion, knowledge and capabilities will grow leaps and bounds as a student at your university and will take me closer to my goal of establishing my promising professional prowess in the technological sphere.
